

infrastructure wiring

Structured wiring is the logical, organized installation of wiring, capable of supporting today's sophisticated entertainment, security, information and communication systems. Laying structured wiring simplifies future system installations, eases rearranging of equipment, and raises the value of your home.

At Marchand Technologies, we take pride in our wiring expertise. Our technicians use their expert skills to deftly run wires into existing homes, leaving an older home cable-ready to accommodate the newest technology, or a newly-constructed structure ready to accept whatever technology it needs today or in the future. We bundle wires to increase protection and expedite installation, then carefully secure and hide wires to minimize the chances of future damage.

The benefits of living in a structured wiring environment include:

- Reduced network downtime, as over 20% of all network downtime is caused by a network's mis-installed cabling system
- Increased home resale value
- Planned infrastructure that supports today's technology
- Ease of equipment moving to other spaces

Structured wiring supports the following technology:

- Automation
- Audio
- Internet
- Networks
- Security
- Telephones
- Television
- Video
- Satellite TV
- Cable TV

Contact us today to see how an investment in structured wiring by Marchand Technologies will transform your environment into a safe and efficient system.
